

BTC Operating System Support & Troubleshooting

Version v1.1.1

Use this before asking for support

Most support issues come from chart setup, alert snapshots, or chapter inputs. Check the simple items first, then email support with the exact chart, timeframe, version, and alert path you used.

Indicator page: AZRO Systems - BTC Operating System (Invite-Only)
Product / access page: AZRO Systems Gumroad
Support: support@azrosystems.com

Fast checks

Issue	Check first
Dashboard looks wrong	Confirm BITSTAMP:BTCUSD, 1W, regular candles, current v1.1.1 script, and correct chapter inputs.
Alert did not match chart	Delete and recreate the alert after updating script or settings. TradingView alerts keep their creation-time snapshot.
Amount looks strange	Check Weekly budget, Cash at Start date, BTC already owned, Start date, Strategy, and Risk level.
Chart warning appears	Fix setup/data/timeframe warnings before relying on dashboard numbers.

Support email checklist

- TradingView username used for invite-only access.
- Chart symbol and timeframe.
- Script version shown in TradingView.
- Which alert path you used, if any.
- Screenshot of the dashboard and settings if support asks for it.

Do not send

- Exchange passwords, seed phrases, wallet recovery words, private keys, or login codes.
- Sensitive account balances unless specifically needed and redacted.
- Webhook secrets in plain text.

When to simplify

If this happens	Simplify by
Alerts feel overwhelming	Use manual dashboard review only until the routine is calm.
Trim logic creates stress	Use a simpler written plan and avoid advanced presets until you can follow them.
You keep changing inputs	Restart the chapter at the next confirmed weekly close instead of editing history.
Automation fails	Return to manual review and paper/test routes before reconnecting live tools.

Support boundary

AZRO can help with product access, setup, documentation, and workflow clarity. AZRO does not take custody, place orders, give individualized financial advice, or manage your exchange/wallet accounts.
