

XRP Top/Bottom Indicator Alert Setup Card

Version v1.4.4

The rule that matters most

Create alerts on BITSTAMP:XRPUSD, 1W, regular candles, then choose the smallest alert stack you will actually follow. After updating scripts or materially changing indicator inputs, delete and recreate alerts so TradingView uses the current settings.

Core alert stack

Alert	Trigger	Purpose
MAJOR TOP	Once Per Bar Close	Serious defensive top confirmation. Review plan risk and dashboard before taking action.
RADAR TOP	Once Per Bar Close	Early defensive top window. Keep active with MAJOR TOP for the default top stack.
MAJOR BOTTOM	Once Per Bar Close	Serious accumulation/bottom confirmation. Review plan buy behavior and risk context.
RADAR BOTTOM	Once Per Bar Close	Optional early bottom track for users who want more bottom-context alerts.
WEEKLY PLAN ACTION (XRP)	Once Per Bar Close	Optional dashboard-review weekly-plan alert. Check DO NOW on the dashboard.
Any alert() function call	Once Per Bar Close	Exact weekly-plan message path. Sends the weekly order amount on close-confirmed action weeks when applicable.

Optional context alerts

Alert	Use it when	Watch-out
LIGHT TOP / LIGHT BOTTOM	You want local exhaustion or mean-reversion context.	Optional context only; do not treat as a major confirmation layer.
RISK (XRP)	You want caution context around risk-colored XRP conditions.	Risk context is not an order by itself.

Recommended default alert setup

Best default for most users

Keep MAJOR TOP, RADAR TOP, and MAJOR BOTTOM active. Add one weekly-plan path: either WEEKLY PLAN ACTION for reminder-style review, or Any alert() function call if you want the exact weekly order amount on action weeks. Add RADAR BOTTOM only if you intentionally want the optional bottom track.

Naming convention

- Use literal names: XRP MAJOR TOP 1W, XRP RADAR TOP 1W, XRP MAJOR BOTTOM 1W, and XRP Weekly Plan 1W.
- For the exact-message path, use XRP Exact Weekly Plan 1W.
- If you maintain more than one sleeve, include the sleeve name in the alert title.

Common mistakes

- Setting alerts on the wrong timeframe or a non-canonical XRP chart.
- Using Any alert() function call and WEEKLY PLAN ACTION when you only wanted one weekly-plan ping.
- Forgetting that TradingView alerts keep the indicator settings that existed when the alert was created.
- Treating optional context alerts as automatic order instructions.

Best default stack in one sentence

Simple and durable

Run BITSTAMP:XRPUSD on 1W regular candles; keep MAJOR TOP, RADAR TOP, and MAJOR BOTTOM active; add one weekly-plan alert path; and recreate alerts after script updates or material input changes.
